

# The Green Door...

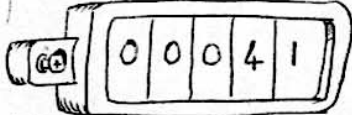

HARRY'S NICE QUEST THEORY

HARRY TOWLING RUNS A BUSY REHEARSAL ROOM, AND IS TRYING TO MONITOR HOW OFTEN THE FRONT DOOR OPENS AND CLOSES ... & THAT HE CAN WORK OUT HOW FREQUENTLY HE WILL NEED TO OIL IT. (HARRY IS VERY SHREWD ... BUT THAT GOES WITH THE JOB, DOESN'T IT?)

SO, AT THE START OF THE WORKING DAY, TERRY SETS UP A COUNTER ON THE DOOR FRAME... EVERYTIME THE DOOR OPENS, THE COUNTER COUNTS 1 DIGIT...

BY THE END OF THE DAY, 20 BANDS HAVE REHEARSED (I DID SAY IT WAS BUSY, DIDN'T I?) AND THE COUNTER READS:

(THE EXTRA 1 WAS HARRY GOING OUT FOR LUNCH)

HARRY CALCULATES THAT IF 20 BANDS HAVE REHEARSED, AND THE DOOR HAS BEEN USED 44 TIMES, THEN IF 10 BANDS REHEARSE, THE DOOR WILL BE USED 22 TIMES.
